

Research Findings: Feature-Based Methods Win

(a) Feature vs Graph Methods

(b) Interpretation

Key finding

Tabular logistic regression outperforms all graph-based and fusion models on the CMS-Kaggle benchmark under provider-disjoint CV.

- LR AUPRC: 0.681 ± 0.039
- Best graph model (R-GCN): 0.654 ± 0.046 (-4.0%)
- Best fusion: 0.667 ± 0.052 (-2.1% vs LR)

Rich provider tabular features dominate relational signal under strict leakage control.
